Dear [PROVIDER-NAME] [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Diagnoses:

Crohn's disease (Gastric, Pancolonic) - diagnosed June 2016

Frequent relapses on Azathioprine

[NAME] started July 2018

Last Endoscopy August 2019 - no evidence of active disease.

Medication:

Azathioprine 75 milligrams daily

[NAME] 5 mg/kg eight weekly

I would be grateful if you could arrange transition for [NAME] who is now 16-1/2. He was diagnosed with Crohn's disease when he presented in June 2016 with a history of bloody diarrhoea. He mainly had Crohn's disease with microscopic Gastritis and Granuloma in the stomach. He was treated with oral steroids and started on Azathioprine. In June 2018 he was started on [NAME] as he was having frequent relapses requiring steroids despite being on Azathioprine.

I am pleased to report that he has done extremely well on the [NAME] and remains asymptomatic. Endoscopy two months back did not show any evidence of active disease.

[NAME] has now had a few infusions with the Adult Services and he is able to manage his condition independently. He would be ready for transition and would prefer to have it at Poole Hospital.

[NAME] was also seen by [NAME] [NAME], Paediatric Dietician to give advice regarding weight management in view of an increasing BMI.

Yours sincerely
