Dear [PROVIDER-NAME] [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Diagnoses:

Haemophilia A baseline Factor VIII about 1%

Previous exposure to Hepatitis C and HIV

Crohn's disease

I reviewed Mr [NAME] today. I am glad to say he has remained generally well and has not had a haemostatic problems since his last visit. In fact he has not had to use any Factor VIII over six months. As you know he is on demand treatment and uses the plasma-derived Factor VIII concentrate Fandhi. Crohn's disease has also been relatively quiet with 1-2 bowel movements daily. He is on Azathioprine, Lansoprazole and Sanatogen Gold for this.

He sees [PROVIDER-NAME] on a regular basis for HIV and continues on Travada and efavirenz.

He has no dental problems and sees the dentist on a regular basis.

On clinical examination, he was well. [NAME] were no signs of chronic liver disease. Abdominal examination was nil of note. Examination of the joints remained unchanged with arthropathy at the right ankle with limited range of movements.

As you know, he has been PCR negative for Hepatitis C. His last liver function tests in March were completely normal.

I have arranged to repeat his routine blood tests today which include a blood count, chemistry panel, Factor VIII inhibitor screen and Prothrombin time. I will see him again in six months.

Kind regards.

Yours sincerely
