Dear [PROVIDER-NAME] [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Diagnoses:

Crohn's colitis plus irritable bowel component

Enteropathic arthritis

[NAME] came for review today saying from the gut point of view, she was very well. She has remained asymptomatic from her colitis for a long time and previously troublesome IBS-like symptoms have seemed to settle. In view of this, I am simply putting her back on to our Virtual Clinic System for review as necessary.

From the arthritis point of view, she is getting some problems with both hands and feet but N felt that it was likely to be osteoarthritis rather than her enteropathic arthritis since certainly there was no sign of synovial inflammation and her inflammatory markers are normal. He is arranged to re-X-ray her hands and feet and to review her in the Rheumatology Clinic in a few months' time. I suggested that she decrease her methotrexate to 12.5 milligrams weekly.

Yours sincerely
