Dear [PROVIDER-NAME] [NAME], [ADDRESS], Totton, Southampton, [POSTCODE]

DOB: [DATE], Hospital Number: [MED-ID], NHS Number: [NHS-NO]

Diagnosis:

- 1.Ulcerative colitis requiring sub total colectomy with ileo-anal pouch and defunctioning ileostomy.
- 2.Re-fashioning of ileostomy at St Mark's - October 2005
- 3.Bilateral DVTs requiring longterm Warfarin therapy
- 4.High stomal losses

I reviewed Mrs [NAME] [NAME] morning. She is doing well, although still experiencing problem stomal losses. She is emptying her bag at least ten times during the day and three or four times at night. [NAME] is occurring despite taking a large dose of Loperamide, Di-Hydrocodeine and a 5HT_{2A} Inhibitor. She has previously used oral rehydration fluids which have helped, but she is not using these. She may need to go back on these, although we will check her urinary sodium first and then contact her with the results.

Her weight today was 104 kgs which is steadily climbing and she is going to look at her diet increase her physical activity.

I will also arrange for her to have a DEXA scan as she is clearly at risk of osteoporosis and plan to see her again in three months.

Yours sincerely
