Dear Mr [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Thank you for referring Mrs [NAME] met for the first time today. She has a very extensive past medical history which I will not reiterate fully. However in brief summary, she is 51 and initially had ulcerative colitis. She was treated with colectomy and subsequently an ileoanal pouch. She had significant problems after the pouch formation requiring intensive care admission and subsequent laparotomies. Ultimately she was seen at St Mark's Hospital and I understand that Sue [NAME] has formed a new pouch. Sadly Mrs [NAME] continues to have problems. Her bowels open about 20 times a day including every hour at night. She has been helped with the use of ciprofloxacin and occasional metronidazole. She takes Imodium and codeine (she has not been using probiotics). She has had significant problems with dyspareunia. She had been seen by all the gynaecologists who have tried a variety of treatments including amitriptyline but this has not helped of any help. The pain occurs on initial penetration and is low in the vagina principally on the left side. The question has been raised to us whether this relates to her previous surgery given her long history of problems with her pouch.

I have reviewed part of her notes (there are four volumes). As Mrs [NAME] has been seen by a number of surgeons, I did suggest it may be sensible if she was re-seen by one of them. However she feels that she has had a number of problems and felt that travelling to St Mark's was too far to travel so asked me to therefore assess her.

In the first instance we have arranged for her to have a pouchoscopy and examination under anaesthesia. She is happy with this plan.

Yours sincerely

Mr [NAME]

Consultant Surgeon
