Dear [PROVIDER-NAME] [NAME], [ADDRESS]. [POSTCODE]

DOB: [DATE], Hospital Number: [MED-ID], NHS Number: [NHS-NO]

Problems:

Panenteric Crohn's disease with perianal and perineal involvement (diagnosed May 2008 previously with Modulen IBD x2)

Reinvestigation September 2009 panenteric on histology (worse distally)

Current Medications:

Pentasa 1 gram twice daily

Azathioprine 75 milligrams once daily (started [DATE])

Lansoprazole 30 milligrams nocte

Multivitamins and mineral supplements (Sanatogen Gold A to Z)

I saw [NAME] together with her mum and dad in [PROVIDER-NAME]'s Outpatient Clinic today. She is better since she starting her azathioprine and has had lessening of her symptoms of abdominal pain. She is opening her bowels once a day not during mealtimes and has had no significant abdominal pain associated. Her appetite is better and she is feeling less lethargic in herself. On examination in clinic she has incremented her weight to 42.8 kg today which plots on the 2nd centile and her height was not re-measured but was 158.6 cm back in March which plots on the 25th centile. The abdomen was non-tender. [NAME] had no organomegaly or palpable bowel loops.

Impression: [NAME] remains well on her current treatment regime.

We have repeated her bloods today in clinic to monitor her blood counts on azathioprine and will see her again in one month's time to further assess her progress unless she is more unwell in the meantime and she has the contact details of Mick Cullen and Claire Barnes, our paediatric gastroenterology specialist nurses if she runs into trouble prior to that time.

Thank you for your help with the ongoing management of this young lady.

Yours sincerely
