Dear [PROVIDER-NAME] [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

GP: Information only

Diagnosis: Crohn's disease, ileocolonic resection.

Medications:

Humira 40 mgs every other week (January 2017) account on hold

Oral Fluconazole 50mg daily for seven days (hospital prescription issued)

previous medication

Azathioprine (viral infections)

Infliximab (loss of response).

I reviewed Alice in clinic today. It has been some time since we have seen her with missed appointments and her work abroad. During this time [NAME] had been relatively well. However over the past [NAME] has experienced repeated sore throat and thrush and also headaches after [NAME] inject Humira. Previously when [NAME] had her medication, abdominal pain seized however again over the past months [NAME] was having an increase in frequency four to five times a day with blood, abdominal pain. I believe that [NAME] had some bloods taken and white cell counts were satisfactory. However we do not have anything locally. I have sent her to have routine set today and I have also included vitamin B12 and haematinics. [NAME] has kindly brought stool sample and I have sent that for faecal calprotectin baseline.

[NAME] has been taking Nystatin for her thrush and really quite struggling with ongoing symptoms therefore issued her with a prescription for 50 mgs of Fluconazole to take for seven days. I have also asked Alice to hold off taken any further Humira. I have also requested Adalimumab levels to see if [NAME] has indeed developed antibodies. I have explained to Alice depending on the results of the levels and calprotectin we will determine and if we need to investigate further endoscopically. The levels will obviously help us as to dosing or switching class.

[NAME] is due to go on holiday 28 th July to the 8 th August I will see her after this date with the aforementioned investigations.

With kind regards

Yours sincerely
