Dear [PROVIDER-NAME] [NAME]-NUNN , 202 Gerrards Green, Beaminster. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

I reviewed Seth in clinic on 14 August following his recent admission for endoscopy.

I am pleased to report that his gastroscopy and ileocolonoscopy plus oesophageal, antral, duodenal and colonic histology were all normal which is obviously good news.

He does however have persistent pain with fatigue and poor appetite sometimes not really wanting to eat, certainly taking less than previously. He is stooling every two to three days. Of note he has no diagnosis of chronic fatigue ? ADHD/autistic spectrum disorder and has continuing input for treatment. [PROVIDER-NAME], Consultant Paediatrician in Dorchester.

We have discussed various issues:

I have booked an MRI to complete his gastrointestinal investigations which I think is appropriate.

I have asked for the dietitian to see him for review

We have discussed the practical rehabilitative strategy for chronic fatigue which looks to be appropriate and should continue

I will review him in six to eight weeks

I have agreed with him that his gut symptoms probably reflect a post-viral irritable bowel syndrome picture and hence despite the severity of those symptoms the lack of a diagnosis following investigations as above

With kind regards

Yours sincerely
