Dear [PROVIDER-NAME] [NAME] , [ADDRESS], Totton, Southampton, [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Diagnoses:

Total colectomy and pouch formation eight years ago

Short bowel syndrome

Recurrent pouchitis

DVTs on warfarin

I reviewed this nice lady today in clinic who is much improved since the introduction of VSL# currently taking one sachet twice a day, which although is less than we would normally recommend. She has certainly seen significant improvements in her bowel frequency. She is currently having her bowels move once at night, whereas previously she was going three to five times and only going five times a week. She has not had a flare in her symptoms for the last three months but continues to use Ciprofloxacin and Metronidazole.

Otherwise her weight is stable. She has a good appetite and is producing good volumes of urine. We have simply arranged for her to have some repeat blood tests and urine sodium today and we will see the results in a year's time. If she does have problems in that time then the dose of VSL#3 can be increased to two sachets a day which may have some benefit for her.

Yours sincerely
