Dear Jennie

MAST [NAME] YOUNGER, [ADDRESS]. [POSTCODE]

DOB: [DATE], Hospital Number: [MED-ID], NHS Number: [NHS-NO]

Diagnosis: Ulcerative colitis in remission

Current Treatment:

Ciclosporin 100 milligrams two times a day

Prednisolone 40 milligrams once a day soluble, plan to review in two weeks' time

Asacol MR 1200 milligrams two times a day

Ranitidine 75 milligrams once a day

[NAME] has been reviewed urgently in my clinic today. I am pleased to say that after a prolon

admission he has recovered from his colitis. He has not had any more blood for the last 24 to

[NAME] looks quite pale in the clinic today and I suspect his haemoglobin may be around 9. I

repeated his blood test today. He is also on considerable potassium supplements and if the bl

are normalising I would be keen to stop those. He has been reviewed by our Paediatric Gastroe

Dietitian, Nicky Heather in the clinic today. I plan to review him in clinic in two weeks' ti

view to change treatments and perhaps reduce mercaptopurine as discussed in the clinic today.

Thank you.

Kind regards
