Dear [PROVIDER-NAME] [NAME], [ADDRESS]. [POSTCODE]

DOB: [DATE], Hospital Number: [MED-ID], NHS Number: [NHS-NO]

I reviewed Mr [NAME] clinic today following the recent CT scan of his nose and paranasal sinuses. The scan showed a minor deviation of the nasal septum but did not show any significant underlying sinusitis.

He continues to feel bunged up much of the time with some nasal obstruction, particularly in the morning. He has been using a nasal decongestant on a daily basis for some years. He has had no recent sinusitis. He has tried with Betnesol drops.

I have explained that topical decongestants can paradoxically make the nose worse rather than better if used on long-term basis. I therefore suggested that he stop this. You may wish to consider him on to a nasal steroid spray. I doubt that any formal surgery will improve his symptoms. I have arranged to review him again routinely.

With best wishes.

Yours sincerely

Mr [NAME] (ORL-HNS)

Consultant ENT Surgeon
