Dear [PROVIDER-NAME] [NAME] , [ADDRESS]. [POSTCODE]

DOB: [DATE] , Hospital Number: [MED-ID] , NHS Number: [NHS-NO]

Diagnoses:

Pulmonary infiltrates (nodules); need to exclude neoplastic (cancer) or inflammatory process

Previous Crohn's disease

Chronic headache

GORD

Thank you for asking me to review this 57 years old patient in the Lung Cancer Clinic.

He is on no medication, has no allergies and is a lifelong non-smoker. He works as a lorry driver and may have been exposed to asbestos. His father died from ischaemic heart disease at the age of 70 and his mother from a peptic ulcer. One of his brother suffered from ischaemic heart disease and died of CVA at the age of 50.

He presented with a non-productive cough since last November. A month later, he was reviewed and a diagnosis of viral infection was made. He re-consulted his GP in January. Because of the persistence of his symptoms, a chest X-ray was requested and he received a course of steroids. He is aware he had no antibiotics.

He has an intermittent wheeze, no significant phlegm and has noted on a couple of occasions sputum with blood. His impression is that this is because he is straining when he coughs. I note that he has a chronic headache, but this is not new symptom. For this, he was investigated in the past with a CT scan but no cause was found.

His family and himself were told that he has cancer. I have explained that it was difficult for me to tell, based on the chest X-ray if this is cancerous or an inflammatory process. Nevertheless, I think it is an infective process as he is not severely unwell despite the chest X-ray findings. His chest X-ray showed a right middle lobe shadow and bilateral pulmonary nodules. [NAME] could not exclude neoplastic(cancer) or inflammatory process.

On examination, he was well, not clubbed, there was no lymphadenopathy and his chest was clear. I have asked him regarding any lumps in his scrotum and he mentioned that he has not felt anything abnormal. I will await for the result of the CT scan to assess the need for testicular examination. Finally, I was sorry that I was not able to reassure him and his supportive family. Obviously, they were upset as they were expecting immediate answers that I was unable to provide without a scan.

A CT chest was requested and we will see him after that. If there is neoplastic process, we will do further investigations.

Yours sincerely

Checked by Consultant but not signed to avoid delay.
