Dear ** *****

***** *****, *****, Route De ****, *****, ***** **** **
DOB: **/**/****, Hospital Number: *****, *** *****:

Diagnosis: Crohn's disease since ***** **

Current Medications:

6-Mercaptopurine 50 milligrams once a day

Sulfasalazine 10 millilitres twice a day

***** one drink a day (see below)

Treatment for *** fever and asthma

Current Nutritional Supplements:

***** one drink - 300 ml (containing 9 scoops) during week days, 150 ml (4.5 scoops) at wee

I saw ***** as part of Dr *****'s ***** Clinic on ** ***** ****. He is looking very well and has gained 5.4 kg in six months. However of note he has only gained 1.8 height. He has recently had his first relapse since diagnosis. This occurred 10 days after an were given to treat tonsillitis, and gave him bloody diarrhoea and abdominal cramps. At your restarted ***** exclusively for 10 days. His symptoms were markedly improved by three days had no further symptoms of bloody diarrhoea or abdominal cramps. He is enjoying ***** and has levels and a good appetite. His bloods, kindly taken two weeks ago, show normal liver function normal inflammatory markers.

On examination ***** looks very well with a normal abdominal examination.

I have organised to see ***** again here in Southampton in six months. I understand that you seeing him in three months again on *****. I have asked *****'s mother to organise a blood two months including an amylase and liver function test as he is on 6-mercaptopurine. ***** reviewed by ***** (our paediatric dietitian) who has cut down the volume of ***** to has to drink at weekends to 150 millilitres. His mother has also asked if we could liaise with new school to inform them of *****'s diagnosis and to provide them with information. I have ***** (our paediatric gastroenterology specialist nurse) to forward some written information disease and what to look for to Les ***** High School. We look forward to seeing ***** a months. We will keep an eye on *****'s growth and I note that it is two years since ***** l endoscopy. This may be something to consider should his height velocity fail to improve.

Yours sincerely

Dr *****
